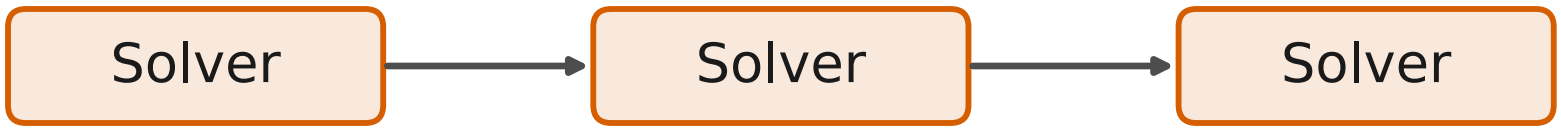
organization collapse

role-structured

0.000–0.120

roles named and described in prose

role-free



0.846–0.976

one generic prompt, identical for all three

structurally enforced

n/a

typed interfaces; planner schema has no answer field

Same three-agent loop, routing and budget in all three (3×2=6 cycles). Topology is design, verified in prompts.py / schemas.py.
The collapse column is measured (mechanical, no judge), as the range over the three actors. “n/a”: the enforced schema has no answer field, so the measure cannot fire — a 0 there would not be a finding. Dotted rules mark the enforced typed interface.
