Shared by every condition

What differs

		measured	verdict
role-structured	roles asserted (rhetorical)	first pass 0.31–0.80 *role prompts, in prose* recovery 0.014–0.324 · collapse 0.05	organized; repairs (1 of 3)
role-free	no role info in any prompt	first pass 0.31–0.80 *one generic prompt for all 3* recovery 0.015–0.247 · collapse 0.91	same answers; repair falls
structurally enforced	roles enforced (architectural)	first pass 0.28–0.78 *planner schema; no answer field* recovery 0.139–0.395 · attrition 8–17%	organized, but brittle

Ranges span the three actors. ‘collapse’ = mechanical functional-collapse rate — no judge, because per FINDING-25 the adjudication is not condition-blind.
